Integrated Data Science Workflows

The primary objective of using **Generative AI Lab** is to train a high-quality, domain-specific Named Entity Recognition (NER) model.

This involves **multiple stages**, each critical for ensuring the accuracy and efficiency of the model.

- Preparing a dataset,

- Pre-annotation,

- Uploading the data to the Generative AI Lab,

- Annotation,

- Exporting the annotated data,

- Training the NER model,

- Testing the model with sample text.
